SUMMARY

Backend Engineer with 4.5+ years building scalable Python/Django/REST platforms across compliance, healthcare, hospitality, and EdTech domains. Skilled in multi-tenant RBAC architectures, async task pipelines, payment system idempotency, and AI/LLM-assisted workflows. Proven record of translating complex domain requirements into production-grade APIs within fast-paced Agile teams.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript
- **Frameworks & APIs:** Django, Django REST Framework (DRF), FastAPI, Django Channels
- **Databases:** PostgreSQL, MongoDB, Redis
- **Cloud & DevOps:** AWS, GCP, Docker, CI/CD
- **Architecture:** Async Processing, Celery, Event-Driven Design, Multi-Tenant RBAC, WebSockets
- **Integrations:** Stripe, Razorpay, LeadSquared CRM, Twilio, AWS SES, Firebase, GenAI/LLM Integrations

PROFESSIONAL EXPERIENCE

Predigle | Product Engineer | Chennai, India

April 2025 - Present

- Architected REST APIs mapping regulatory frameworks (SOC 2, NIST, HIPAA, CMMC) into versioned control hierarchies, powering an audit-ready GRC assessment engine with evidence tracking, multi-tenant RBAC, and internal/external reviewer workflows.
- Built AI-assisted bulk answering (Excel-schema upload plus LLM auto-mapping of evidence to controls) and secure, link-based external sharing for client-to-client assessments; extended the platform with asset inventory and risk-to-ticket remediation tracking.
- Engineered a healthcare fax-intake and data-extraction pipeline (patient, provider, payer, prescription data) with human-in-the-loop verification and bidirectional sync to the client's database.
- Automated prior authorization (PA) packet generation by running AI against payer policies, producing clinical summaries and submitting packets to third-party portals (e.g., CoverMyMeds, Availity).

Cyces Innovation Labs LLP | Backend Developer | Chennai, India

June 2023 - March 2025

- Delivered Django/DRF/PostgreSQL backends with full CRUD APIs and dashboards across three concurrent platforms: hospitality/PG management (properties, billing, ticketing, resident portal), an online music academy (batching, attendance, teacher/admin calendars), and a sports training system (enrollment, scheduling, streaks) spanning web and mobile clients.
- Engineered idempotent Razorpay/Stripe webhook handlers across all booking and payment flows, eliminating transaction state failures.
- Migrated heavy synchronous reporting workflows to Celery/Redis task queues, removing API response timeouts.
- Built a bidirectional REST integration with a third-party lead-management CRM (LeadSquared), pushing enquiry data in real time and pulling qualified leads back to unify ad-sourced enquiries with the platform's booking pipeline.
- Built an omni-channel (email/push/SMS) notification hub via Twilio and AWS SES for real-time session and booking alerts.

Thoughtworks | Application Developer | Coimbatore, India

March 2022 - March 2023

- Completed a 4-month structured onboarding in clean-code practices, TDD, Agile team workflows, and pair programming before moving into full-time delivery.
- Delivered secure REST API features for a tier-1 global banking client in a heavily regulated environment.

EDUCATION

Sri Krishna College of Technology | B.E. in Computer Science | Coimbatore, India

2018 - 2022
